New Horticulture Programs at Triton College

**Sustainable Agriculture Technology**

Will provide students the skills necessary to manage an environmentally sound and sustainable urban food production system. Graduates are qualified for numerous positions including agricultural and food science technician, hydroponics technician, food hub technician, community supported agriculture, and managing the entire lifecycle of sustainable food production.

**Sustainable Agroecology**

Designed for learners who wish to gain an appreciation and practical skills to use sustainable practices that will positively influence the quality of natural ecosystems and human environment.

**Sustainable Food Production**

Designed for learners who wish to focus on how to produce nutritional food crops and methods to overcome the availability of fresh and nutritious food produce.

**Sustainable Landscape Practices**

Background in sustainable landscape features and practices, such as soil and water conservation; appropriate plant selections, use of fertilizers and pesticides with an emphasis on organic materials; reduced use of fossil fuels; infrastructure enhancements such as green roofs and xeriscaping.
